-- Background of the Invention:

Field of the Invention: -- and

lines 5-6:

The invention relates to a piezoelectric actuator according to the
preamble of Claim 1 with:

- a stack of a plurality of individual piezoelectric actuator elements, which are disposed between inner electrodes and which contract or expand in a main oscillation direction in dependence on an applied electric voltage,
- a first metallization strip and a second metallization strip, the inner electrodes being respectively connected in an alternating manner to the first or second metallization strip,
- a first outer electrode and a second outer electrode which are respectively fixed to the first or the second metallization strip in order to electrically contact the piezoelectric actuator and
- a first connection element and a second connection element for externally contacting the piezoelectric actuator which are respectively connected to the first or the second outer electrode.
